

KL5151 | 1-channel incremental encoder interface

The KL5151 Bus Terminal is an interface with 24 V inputs for the direct connection of incremental encoders. A 32 bit counter with a quadrature decoder and a 32 bit latch for the zero pulse can be read, set or enabled. The KL5151 inputs can optionally be used as single or two-counter inputs. The signal inputs use 0 V as the reference potential and are electrically isolated from the K-bus.
