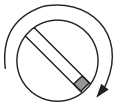
▣Sensitivity adjustment

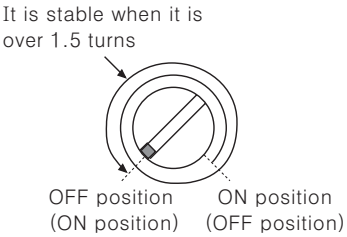
Please turn potention VR to set sensitivity as below procedure.

❶ Without a sensing object, turn the potention VR to the right and stop at the proximity sensor is ON(OFF).

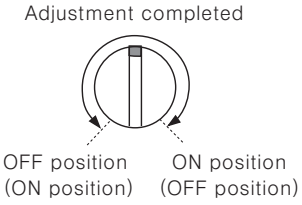


❷ Put the object in right sensing position, turn the potention VR to the left and stop at the proximity sensor is OFF(ON).

❸ If the difference of the number of potention VR rotation between the ON(OFF) point and the OFF(ON) point is more than 1.5 turns, the sensing operation will be stable.



❹ If it is set in sensitivity adjustment position of potention VR at center between ❶ and ❷, sensitivity setting will be completed.



※When there is distance fluctuation between proximity sensor and the target, please adjust ❷ at the farthest distance from this unit.

※Turning potention VR toward clockwise, it will be Max. and turning toward counter clockwise, it will be Min. the number of adjustment should be 15±3 revolution and if it is turned to the right or left excessively, it will not stop, but it idles without breakdown.

※( ) is for Normal Close type.

▣Grounding

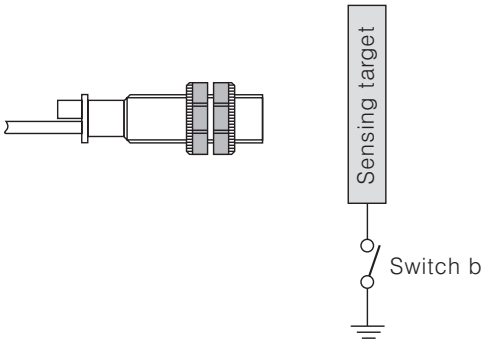
The sensing distance will be changed by grounding status of capacitive proximity sensor and the target[50×50×1mm(Iron)]. Please check the material when installing it on panel.

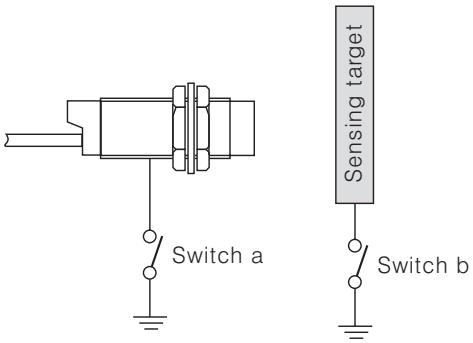
●CR18 Type

Ground condition (Switch b)	ON	OFF
Operating distance (mm)	8	4

●CR30 Type

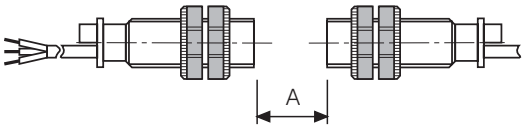
Ground condition	Switch a	ON	OFF	ON	OFF
	Switch b	ON	ON	OFF	OFF
Operating distance(mm)		15	18	6	6





▣Mutual-interference & Influence by surrounding metals

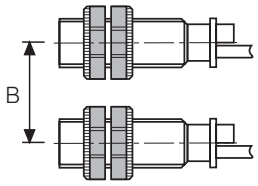
When several proximity sensors are mounted closely, malfunction of sensor may be caused due to mutual interference. Therefore, be sure to provide a minimum distance between the two sensors, as below charts.



Face to Face

Item \ Model	CR18	CR30
A	48	90
B	54	90

(Unit:mm)



Parallel

When sensors are mounted on metallic panel, you must prevent the sensors from being affected by any metallic object except target. Therefore, provide minimum distance as shown.

ø d	54	90

▣Materials

◎Materials of sensing targets

Sensing distance may be different by electrical characteristic of sensing target(Conductivity, Non dielectric constant)and status of water absorption, size etc.

◎Effect by high frequency electrical field

It may cause malfunction by machinery which generate high frequency of electrical field such as a washing machine etc.

◎Surrounding environment

There is water or oil on surface of sensing part, it may cause malfunction.
If the bottle for detecting of level is coated by oil etc., it may cause malfunction.
Especially, 15mm type has high sensitivity for induced objects, please be careful of waterdrops.

◎Oil

Do not let the oil or oil liquid is flowed into the sensor, the case is made by plastic.
