Safety Precautions

Refer to *Warranty and Limitations of Liability*.

⚠ WARNING

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

Precautions for Correct Use

Do not use the product in atmospheres or environments that exceed product ratings.

● Wiring

Cable

- The E3S-C uses an oil-resistive cable to ensure oil resistivity.
- Do not allow the cable to be bent to a radius of less than 25 mm.

● Mounting

Mounting

- When mounting the E3S-C, do not hit the E3S-C with a hammer, or the E3S-C will loose watertightness.
- Use M4 screws to mount the E3S-C. The tightening torque of each screw must be 1.18 N·m maximum.

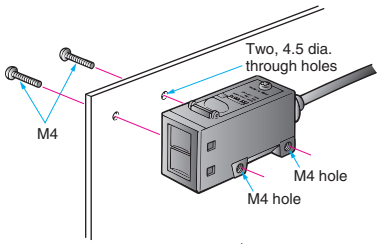
Mounting Bracket

- When mounting the E3S-C with the mounting bracket so that sensing objects will be in the direction of the mechanical axis, use the optical axis lock holes.
- If it is not possible to mount the E3S-C so that the sensing objects will be in the direction the mechanical axis, move the E3S-C upwards, downwards, to the left, or to the right and secure the E3S-C in the center of the range where the light indicator will be lit, at which time make sure that the stability indicator is lit.

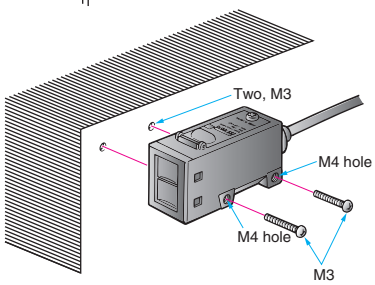
Direct Mounting

Mount the E3S-C as shown in the following illustration.

Mounting with M4 Screws



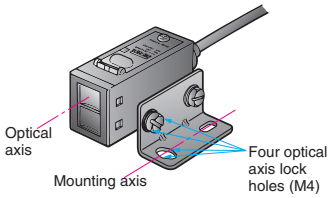
Mounting with M3 Screws



Optical Axis Adjustment

Optical Lock Holes

By inserting screws into the optical axis lock holes, the Mounting Bracket will be in the direction of the optical axis of the E3S-C.



● Adjusting

Optical Axis of Through-beam Sensor

The E3S-C Through-beam Models incorporates two lenses, one of which will be used as shown in the following illustration. When using a Slit, the Slit must be on the side where the lens to be used is located.

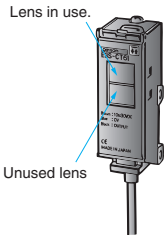
Vertical Model



Water Resistance

To ensure the water resistance of the E3S-C, tighten the screws of the operation panel cover to a torque of 0.34 N·m to 0.54 N·m.

● Others

Oil and Chemical Resistance

- Although the E3S-C is oil-resistance, refer to the following table before using the E3S-C in places where oil may be sprayed on the E3S-C.
- Tests were carried out with the following oils and it was certified that the E3S-C resists these oils.

Oil	Product name	Kinematic viscosity (mm^2/s (cst)) at 40°C	PH
Lubricating oil	Velocite No.3 (manufactured by Exxon Mobil)	2.02	---
Water insoluble machining oil	Yushiron Oil No. 2 ac (manufactured by Yushiro Chemical Industry Co., Ltd.)	Less than 10	
Water soluble machining oil	Yushiroken EC50T-3 (manufactured by Yushiro Chemical Industry Co., Ltd.)	---	7 to 9.5
	Yushiron Lubic HWC68 (manufactured by Yushiro Chemical Industry Co., Ltd.)		7 to 9.9
	Griton 1700D (manufactured by Toho Chemical Industry Co., Ltd.)		7 to 9.2
	Yushiroken S50N (manufactured by Yushiro Chemical Industry Co., Ltd.)		7 to 9.8

Note: 1. The E3S-C maintained a minimum insulation resistance of 100 MΩ after the E3S-C was dipped in all the above oils at a temperature of 50°C for 240 hours.

2. When using the E3S-C in a place where an oil other than the ones listed above is sprayed on the E3S-C, refer to the above kinematic viscosity and ph values. The location may be suitable for the E3S-C if the kinematic viscosity and pH values of the oil are close to the above kinematic viscosity and pH values, but make sure that the oil does not contain any additive that may have a negative influence on the E3S-C.
